

How To Work Out How Many Ties You Will Need

Measure the whole surface area of the walls you are re-tieing (including windows and doorways) and times this by 2.5

e.g. For 40 sq m total surface area

$$40 \text{ sq m} \times 2.5 = 100 \text{ ties needed}$$

N.B If using the resin system, you will need 1 tube of resin per 25 ties
